# Week 1: Easier - Y7 to Y9 only
Factors

Around each of the hexagons are three upright triangles.

The numbers in the triangles are chosen from 2, 3, 4, 5, 6 or 7 (they can repeat!)

The numbers in the triangles around each hexagon multiply together to give the number in the hexagon.

Fill in the empty triangles and the central hexagon.

All answers should be submitted to Mrs Uff by close of play Friday 24th April with your name, your tutor base, your house and a fully worked Mathematical solution.
Good Luck!
